

STOP WAITING FOR CLOUD-NATIVE FROM OTHER VENDORS.  
GO WITH AUTOMOX NOW.

## 6 REASONS YOU CAN'T AFFORD TO WAIT FOR THEIR CLOUD-NATIVE PATCHING

*Today's hybrid workforce requires modern IT operations solutions that are cloud-native now. Only Automox is delivering. Here's why you shouldn't wait on the others any longer.*

### ✓ **MANAGE ENDPOINTS FASTER, EASIER, NOW**

Automox reduces the time and cost of endpoint management by up to 80% over hardware-heavy solutions like Ivanti's. Which means you'll be spending an extra \$600 per device – or more – while you wait for something cloud-like from them. Automox is here now and sets up instantly. Just add endpoints, assign groups, and automate your customizable policies. There's no costly, on-premises servers and related software licenses to buy, manage, and version control.

### ✓ **EMBRACE THE MOVE TO HYBRID WORK**

What's the best way to manage the new realities of some people returning to the office while others remain remote? You need a flexible, extensible platform that streamlines IT to solve any modern demand. Only cloud-native platform with Automox lets you scale quickly for any changing endpoint management need.

### ✓ **COUNT ON LESS RISK, BETTER RESULTS.**

Attackers move fast. Cloud-native goes faster – an urgent necessity in today's world of advanced threats. Automox eliminates vulnerabilities with zero-touch and sets the standard for remediating zero-day vulnerabilities within 24 hours, and critical vulnerabilities within 72. The inability to rapidly remediate when using cumbersome, legacy platforms like Ivanti is often identified as a root cause for breaches.

### ✓ **BREAK FREE FROM COSTLY HW AND NEEDLESS SW.**

Legacy IT tools are a maddening mess of on-prem servers, point products, and single-solution software. Move beyond those complexities and physical requirements with Automox – cloud-native management for any endpoint, anywhere, any time. Our platform removes the need for hardware, excess software, and even VPNs. Zero hassles, infrastructure, or maintenance.

### ✓ **UNIFY IT OPERATIONS INSTANTLY.**

On-premises security solutions that don't offer cross-platform support simply won't work for unifying remote workers and multi-organizational IT teams. Automox unites IT teams with industry-leading ease-of-use and works across Windows, macOS, and Linux, along with a growing library of third-party applications. Only Automox allows for this level of fluid collaboration for rapid action and response.

### ✓ **DEFEND AGAINST RANSOMWARE.**

Ransomware is more of a threat than ever, and vulnerable operating systems and applications are the targets of most attacks. And, today's move to remote work has made systems more unprotected and difficult to patch. Securing all those remote endpoints needs a true cloud-native platform for anywhere, anytime updates right away – not an on-prem platform like Ivanti Patch or a promise of becoming cloud-native in the future.
