AUTOMOX

6 REASONS
WHY AUTOMOX OUTPERFORMS SCCM.

Yesterday's endpoint management was never built to meet the evolving demands of today's remote, distributed workforces. It's time to stop using legacy solutions hoping for modern outcomes.

ZERO HASSLES, INFRASTRUCTURE, AND MAINTENANCE

Move beyond the complexities and physical requirements of legacy on-premises solutions with Automox – cloud-native endpoint management for any endpoint, anywhere, any time. Our SaaS platform eliminates the need for hardware, unnecessary software, and even VPN connections, You'll no longer need to manage, monitor, and maintain on-site infrastructure.

FASTER, EASIER, AND MORE COST-EFFECTIVE

Automox reduces the time and expense of endpoint management by up to 80% compared to installing and maintaining a hardware-heavy solution. Automox sets up instantly. Just add endpoints, assign groups, and automate your customizable policies. There's no costly on-premises patching servers and related software licenses to buy, manage, and version control. With Automox there are no surprises or hidden fees, unlike SCCM, and you can spend your resources more efficiently and effectively.

ANYTIME, ANYWHERE AUTOMATION

According to Gartner, cloud services will soon be essential for 90% of business innovation, particularly when it comes to expanding on a foundation of automation. If you can imagine it, Automox can automate it for any internet-connected endpoint with Automox Worklets™. Since SCCM can only see and manage endpoints connected to a VPN, this level of automation in their platform is virtually impossible.

GREATER AGILITY AND SCALABILITY

Automox is a flexible, extensible platform that easily scales to meet your rapidly changing endpoint management needs. We allow you to streamline and simplify patch management within your SCCM environment. You can customize your product experience and act proactively – whether that's mitigating new vulnerabilities before a patch is published, installing software packages, or removing a legacy vendor's footprint — all through a single agent.

LESS RISK, BETTER RESULTS

Automox eliminates vulnerabilities with zero-touch and sets the standard for remediating zero-day vulnerabilities within 24 hours, and critical vulnerabilities within 72. Known vulnerabilities are the largest threat vector for organizations today, and the inability to rapidly remediate when using cumbersome, legacy platforms is often identified as a root cause for breaches.

MORE COLLABORATIVE

On-premises security solutions that don't offer cross-platform support simply won't work for unifying remote workers and multi-organizational IT teams. SCCM was built to only support Windows environments. Automox unites IT teams with industry-leading ease-of-use and works across Windows, macOS, and Linux, along with a growing library of third-party applications. Only Automox allows for this level of fluid collaboration for rapid action and response.
